

**PACER PUMPS INTRODUCES UPGRADED SERIES S  
SELF- PRIMING CENTRIFUGAL PUMP**  
*America's Leading Pump Manufacturer Redesigns Pump  
with Customer-Driven Enhancements*

LANCASTER, PA – July 2006 – With the record rainfall that swamped the Northeast and Mid-Atlantic states during Spring 2006, waterlogged farmers, homeowners, and contractors have been singing the praises of the new and improved Series S pump recently launched by Pacer Pumps. The redesigned Series S Self-Priming Centrifugal Pump now offers a critical combination of improvements that make this popular workhorse pump, stronger, more durable, more reliable, and more user-friendly than ever.

The enhanced design of the new Series S is the result of years of constant testing and evaluation, and strongly reflects customers' suggestions and feedback. Users will find that the new Series S still provides corrosion-resistant general service on water, salt water, and many agricultural chemicals. Plus, the latest version offers a reinforced port for increased strength; greater durability from a new ribbed body design; an extra-large, super-tough handle for more convenient portability; molded threaded inserts that allow quicker, one-tool inspection; easier, more user-friendly slotted hex head fasteners; and a more efficient double-sized weep hole.

"At Pacer Pumps, we constantly test and evaluate the product that we originally designed, and we listen to our customers and try to present what they want. I feel that the new Series S is as close to ideal as you can get," says Glenn Geist, General Manager of Pacer Pumps. "When you've been doing something for 35 years, you know what your strengths and weaknesses are, and Pacer makes the best pumps because we've learned how to eliminate the weaknesses."

Customers agree that the Series S Self-Priming Centrifugal Pump from Pacer Pumps is virtually indispensable. "We had a number of 'Emergency Response' calls coming in for New York down through Pennsylvania concerning flooding," explained one of Pacer's leading nationwide suppliers. "The team at Pacer Pumps reacted to our needs very quickly after we depleted our inventory and was able to offer more immediately! Outstanding service! We appreciate it – as will our customers."

Pacer Pumps is a worldwide market leader in the manufacture and distribution of high quality thermoplastic pumps for industry, agriculture, marine, aquaculture and construction applications. Pacer manufactures a complete line of corrosive resistant pumps, and has produced the Series S pump since the company was founded in 1974.
